OCP - OracleAS 10g R2: Admin I - Module 9: Configure and Manage OC4J - RWC

Duration: 0 Days

What you will learn

This module provides an overview of Java 2 Enterprise Edition (J2EE), architecture for enterprise class applications. It also deals with the components on four tiers: client, Web, business, and the Enterprise Information System (EIS) which is supported by J2EE.

Participants learn about Oracle Application Server Containers for J2EE (OC4J), which is a complete J2EE Server and the management and configuration techniques that are involved. They also learn to manage and configure an OC4J instance using AS Control.

Learn To:

Describe the architecture of Java 2 Platform, Enterprise Edition (J2EE)
Describe the key features of Oracle Application Server Containers for J2EE (OC4J)
Create and Manage an OC4J instance

Audience
Database Administrators
Portal Developer
Sales Consultants
Support Engineer
Web Administrator

Course Objectives
Overview of Java 2 Platform, Enterprise Edition (J2EE)
Understand Oracle Application Server Containers for J2EE (OC4J)
Manage OC4J using AS control and command-line utilities
Learn about the basics of OC4J Configuration and Configuration Files
Configure OC4J using AS Control

Course Topics

Configure and Manage OC4J Tutorial Part 1
Describe the architecture of Java 2 Platform, Enterprise Edition (J2EE)
Understand about Client-Tier, Web-Tier and Business-Tier components

Configure and Manage OC4J Tutorial Part 2
Create OC4J instances
Start and stop OC4J instances
Enable or disable application startup
Configure OC4J instance properties

Configure the Web site and JSP properties
Edit OC4J configuration files

Configure and Manage OC4J Demonstration
Demonstrate creating and managing an OC4J instance
