

Hyperion Master Data Management 9.0 Administration

Duration: 3 Days

What you will learn

Hyperion System 9 Master Data Management (Hyperion MDM) enables organizations to synchronize master data across Business Performance Management applications including BI platforms, financial and analytic applications, and transaction systems. In this course, you learn how to administer Hyperion MDM to manage changes in enterprise master data.

Prerequisites

Suggested Prerequisites

Basic knowledge of Hyperion Business Performance Management products
Basic accounting concepts

Course Objectives

Describe the Hyperion MDM architecture
Manage versions and hierarchies
Configure applications
Manage and organize properties
Implement business rules
Describe Hyperion MDM concepts and terminology
Navigate the Hyperion MDM user interface
Load master data
Export master data
Manage security
Track master data changes

Course Topics

Master Data Management Overview

Describing Master Data
Master Data Management Challenges
Hyperion MDM Solution
Hyperion System 9
Key Benefits of Hyperion Master Data Management
Master Data Key Terms and Concepts

Navigating the Hyperion MDM User Interface

Connecting to Hyperion MDM Applications
Working with Hierarchies
Viewing Node Properties

Working with Master Data

Working with Hierarchies
Searching for Nodes

Comparing Master Data
