

Oracle Tuxedo 10g R3: Application Administration

Duración: 5 Días

Lo que aprenderá

This course trains administrators, architects, and developers on the administration of Oracle Tuxedo applications. The course shows the features and configurable capabilities of the product and how they relate to real-world scenarios.

This training does the following:

Includes a complete overview of the Tuxedo software components and deployment architectures

Helps you plan and architect Tuxedo application strategies

Gives you detailed information about the many static and run-time configuration options available to various Tuxedo applications

Provides administrators with the skills they need to configure, monitor, and troubleshoot various types of Tuxedo applications

Learn To:

Create Tuxedo server and client executables from source code
Design Tuxedo application deployment and execute capacity planning
Configure Tuxedo applications to support native and remote clients to include Workstation and Web Services clients
Use advanced monitoring and dynamic performance configuration options
Secure Tuxedo applications and services
Troubleshoot Tuxedo applications for functional or performance issues

Audiencia

Administrator
SOA Architect

Prerrequisitos

Prerrequisitos sugeridos

Some degree of programming experience
TCP/IP knowledge

Objetivos del curso

Understand the steps needed to deploy a Tuxedo application
Create and update a Tuxedo domain configuration
Monitor the activity and performance of Tuxedo applications
Identify and resolve common operational challenges

Contenido del curso

Installing Tuxedo

Explaining the Tuxedo architecture

Configuring Tuxedo in general

Configuring remote clients

Configuring Security

Configuring multi-machine domain

Configuring transactions

Configuring queuing

Configuring multi-domains

Accessing the Tuxedo Management Information Base (MIB)

Using Tuxedo System and Applications Monitor (TSAM)
