

R12.x Oracle Inventory Management Fundamentals

Duration: 5 Days

What you will learn

This course will be applicable for customers who have implemented Oracle E-Business Suite Release 12 or Oracle E-Business Suite 12.1. You'll focus on the features, functions and benefits of Oracle Inventory.

Learn To:

Set up organizations that correspond to your business units in Oracle Applications.

Define inventory items for Oracle Supply Chain Applications.

Perform inventory replenishment.

Perform ABC classification and cycle count.

Define items, enable lot control, enable serial control and more.

Perform inventory transactions.

Use mobile devices to perform inventory transactions.

Enable dual unit of measure control.

Additional Course Material

Expert Oracle instructors will also teach you to perform inventory transfers and inventory replenishment, as well as how to perform a cycle. You'll view on-hand quantities, create reservations and set up material statuses. Enrolling in this course will also teach you where Oracle Inventory fits in the overall enterprise structure.

Inventory Management

This course reflects the logical flow of the processes involved in inventory management. For example, you'll review defining items, receiving items, issuing items and replenishing items in the same order.

Hands-On Exercises

The practices in this course provide hands-on experience using Oracle Inventory to perform many of the processing and inquiry transactions. These transactions include receiving, moving, replenishing inventory items and generating count tags for physical inventories.

Mobile Devices

These practices also help you understand how to use mobile devices to perform transactions like cycle counting and inventory replenishment.

Audience

End Users Functional Implementer Related Training Required Prerequisites R12 eBusiness Suite Essentials for Implementers Basic understanding of Inventory Management principles **Course Objectives** Understand how to define material statuses Understand how to define and maintain a cycle count Create an ABC ranking of items to be used in cycle counting Understand the overall inventory process in Oracle Inventory Understand how to view on-hand quantities Understand the structure of an inventory organization in Oracle Inventory Understand how to perform inventory transactions using a mobile device Understand the planning and replenishment methods available in Oracle Inventory including min-max planning, reorder-point planning, replenishment counting, and Kanban replenishment Understand the role of an item-master organization Define items in Oracle Inventory Understand the concept of move orders Learn to implement locator, revision, serial, and lot control for items Perform inventory transactions such as subinventory transfer and interorganization transfer Set up shipping networks between inventory organizations and understand the significance of direct shipment and in transit shipment Understand how to create units of measure Understand how to create reservations
