

Object-Oriented Analysis and Design Using UML

Duration: 5 Days

What you will learn

This Object-Oriented Analysis and Design Using UML training teaches you how to effectively use object-oriented technologies and software modeling as applied to a software development process. Expert Oracle University instructors present one practical, complete, object-oriented analysis and design (OOAD) road map from requirements gathering to system design.

Learn To:

Use object-oriented technologies.

Use Unified Modeling Language 2.2.

Perform object-oriented analysis and design.

Follow a software development process using an OO software project.

Create a system design (the Solution model) supporting the functional requirements (FRs).

Benefits to You

By enrolling in this course, you'll experience the benefits of using the widely adopted graphical modeling language?the Unified Modeling Language (UML) version 2.2. Use this to help communicate concepts and decisions, understand the problem and proposed solution and manage complexity of artifacts describing the problem and proposed solution. Furthermore, you'll develop a deeper understanding of the patterns and frameworks that help build more flexible and re-usable software components.

Course Structure

This course is structured to follow a generic form of software development process that focuses on the analysis and design aspects as applicable to an OO software project. This generic process can be easily adapted to specific processes, which are discussed later in the course. Expert Oracle University instructors will present a pragmatic approach to object-oriented (OO) software development following proven OO technologies, principles and patterns as applicable to OO languages like the Java(TM) programming language.

People Who Will Benefit from this Course

System architects, software engineers, systems analysts and designers responsible for the conception and creation of object-oriented software applications will find the most value in taking this course. Architects responsible for the conception and creation of object-oriented software applications can also benefit from this educational investment.

Related Training

Required Prerequisites

Understand object-oriented concepts and methodology

Demonstrate a general understanding of programming, preferably using the Java programming language

Understand the fundamentals of the systems development process

Course Objectives

Describe the object-oriented software development process

including object-oriented methodologies and workflows

Gather system requirements through interviews with stakeholders

Analyze system requirements to determine the use cases and domain model of the problem domain (the Requirements model)

Create a system architecture (the Architecture model) supporting the nonfunctional requirements (NFRs) and development constraints

Create a system design (the Solution model) supporting the functional requirements (FRs)

Course Topics

Examining Object-Oriented Concepts and Terminology

Describe the important object-oriented (OO) concepts

Describe the fundamental OO terminology

Introducing Modeling and the Software Development Process

Describe the Object-Oriented Software Development (OOSD) process

Describe how modeling supports the OOSD process

Describe the benefits of modeling software

Explain the purpose, activities, and artifacts of the following OOSD workflows (disciplines): Requirements Gathering, Rec

Creating Use Case Diagrams

Justify the need for a Use Case diagram

Identify and describe the essential elements in a UML Use Case diagram

Develop a Use Case diagram for a software system based on the goals of the business owner

Develop elaborated Use Case diagrams based on the goals of all the stakeholders

Recognize and document use case dependencies using UML notation for extends, includes, and generalization

Describe how to manage the complexity of Use Case diagrams by creating UML packaged views

Creating Use Case Scenarios and Forms

Identify and document scenarios for a use case

Create a Use Case form describing a summary of the scenarios in the main and alternate flows

Describe how to reference included and extending use cases.

Identify and document non-functional requirements (NFRs), business rules, risks, and priorities for a use case

Identify the purpose of a Supplementary Specification Document

Creating Activity Diagrams

Identify the essential elements in an Activity diagram

Model a Use Case flow of events using an Activity diagram

Determining the Key Abstractions

Identify a set of candidate key abstractions

Identify the key abstractions using CRC analysis

Constructing the Problem Domain Model

Identify the essential elements in a UML Class diagram

Construct a Domain model using a Class diagram

Identify the essential elements in a UML Object diagram

Validate the Domain model with one or more Object diagrams

Transitioning from Analysis to Design using Interaction Diagrams

Explain the purpose and elements of the Design model

Identify the essential elements of a UML Communication diagram

Create a Communication diagram view of the Design model

Identify the essential elements of a UML Sequence diagram

Create a Sequence diagram view of the Design model

Modeling Object State Using State Machine Diagrams

Model object state

Describe the essential elements of a UML State Machine diagram

Applying Design Patterns to the Design Model

Define the essential elements of a software pattern

Describe the Composite pattern

Describe the Strategy pattern

Describe the Observer pattern

Describe the Abstract Factory pattern

Introducing Architectural Concepts and Diagrams

Distinguish between architecture and design

Describe tiers, layers, and systemic qualities

Describe the Architecture workflow

Describe the diagrams of the key architecture views

Select the Architecture type

Create the Architecture workflow artifacts

Introducing the Architectural Tiers

Describe the concepts of the Client and Presentation tiers

Describe the concepts of the Business tier

Describe the concepts of the Resource and Integration tiers

Describe the concepts of the Solution model

Refining the Class Design Model

Refine the attributes of the Domain model

Refine the relationships of the Domain model

Refine the methods of the Domain model

Declare the constructors of the Domain model

Annotate method behavior

Create components with interfaces

Overview of Software Development Processes

Explain the best practices for OOSD methodologies

Describe the features of several common methodologies

Choose a methodology that best suits your project

Develop an iteration plan

Overview of Frameworks

Define a framework

Describe the advantages and disadvantages of using frameworks

Identify several common frameworks

Understand the concept of creating your own business domain frameworks

Course Review

Review the key features of object orientation

Review the key UML diagrams

Review the Requirements Analysis (Analysis) and Design workflows
