

## Primavera Unifier: uDesigner Fundamentals

**Duration:** 4 Days

### What you will learn

This Primavera Unifier: uDesigner Fundamentals training enables you to design business processes, attribute forms and shells. Expert Oracle University instructors will help you develop the knowledge and skills to make effective design decisions that will transform designs into a functioning user interface.

**Learn To:**

Follow good design practices.

Distinguish process types.

Create data structures, shells, business processes and attribute shells.

Import public business processes from other uDesigner environments.

Build data structures.

### Day 1: Overview

This course begins with an overview of navigation, basic features and user administration in uDesigner. It introduces design and development concepts.

### Day 2: Engage in Hands-On Exercises

Next, you will gain hands-on experience designing and building commonly used examples of Simple, Line Item, Text and Document business process types. You will also learn how to re-use forms.

### Day 3: Explore Workflow Functionalities

You will learn about additional workflow functionality, such as conditional routing and sub-workflows, building formulas and validation.

### Day 4: Form Functionality & Integration

You'll review form functionality, including line item consolidation and reset. Finally, you will learn about integration, versioning and portal-enabled business processes.
