

## Oracle Database 11g: SQL Fundamentals II Self-Study CD Course

**Duración:** 0 días

### Lo que aprenderá

The advanced features of SQL allow database users to query and manipulate relational database data. This course is designed to teach you about advanced SQL features, querying techniques, and reporting. This course demonstrates how to control privileges at the object and system level, use group operations to create reports, and manage schema objects. Searching data using advanced subqueries, retrieving hierarchical data, manipulating data with subqueries, and regular expression support are also covered here.

### Audiencia

Database Administrators  
Database Designers  
Support Engineer  
Technical Administrator

### Prerequisitos

#### *Prerequisitos Sugeridos*

Familiarity with data processing concepts and techniques  
Ability to use a graphical user interface (GUI)

### Objetivos Del Curso

Identify the steps for managing data in different time zones in Oracle Database 11g, for managing time intervals, and for  
Recognize the steps for retrieving data using subqueries and using regular expressions to search for, match, and replace  
Recognize the steps for controlling user access to objects and also for maintaining these objects by dropping columns ar  
Recognize the steps for querying data dictionary views to view schema objects, and for performing operations on large ar

### Temas Del Curso

#### **Oracle Database 11g: Controlling User Access and Managing Schema Objects**

Controlling User Access  
Managing Schema Objects

#### **Oracle Database 11g: Data Dictionary Views and Large Data Sets**

Managing Objects with Data Dictionary Views  
Manipulating Large Data Sets

#### **Oracle Database 11g: Managing Data in Different Time Zones**

Using Time Zones and Datetime Functions

#### **Oracle Database 11g: Using Subqueries and Regular Expressions**

Retrieving Data Using Subqueries  
Using Regular Expressions
